DETAILED ACTION

Continued Examination

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 5/6/08 has been entered.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by McGrane (Des. 302,420).

McGrane (Figures 1-8) shows a connector comprising an elongated central body with a central longitudinal bore for insertable attachment of a transformer stud and an elongated conductor accommodating body extending along the central body in step-

wise fashion above and below the body in side-by-side relationship and having a plurality of conductor insertion apertures spaced along the length of the body so as to be longitudinally coextensive with the bore of the body. The central body has a plurality of screw receiving apertures in communication with the longitudinal bore. The conductor accommodating body also has a plurality of screw receiving apertures in communication with conductor insertion apertures. The connector has an additional elongate conductor accommodating body extending along the central body in side-by-side relationship with a plurality of spaced apart additional conductor receiving apertures and screw receiving apertures. The conductor receiving apertures in the conductor accommodating body and the addition conductor accommodating body face in the same direction. The conductor accommodating body and the addition conductor accommodating body are on opposite sides of the central body. face in the same direction.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892 attached.
